Aida Ahmadi Araghi

Product Designer

aidaaraghii@gmail.com · +98 902 165 8686 · www.linkedin.com/in/aida-ahmadi-araghi

Product designer with a computer science degree, working on B2B tools where several groups have to coordinate in one place. At Sepandar.co I moved from a three-month internship into a part-time role and designed a support dashboard used by employers, clients and the delivery team. I run the full loop — stakeholder interviews, workflow analysis, flows, prototypes, usability testing, high-fidelity UI — with a solid understanding of how digital products are structured and developed.

SELECTED WORK

Sepandar Support Dashboard — mobile web app, Sepandar.co

Aug – Dec 2024

- **Problem:** Through discussions with the company manager and observations of existing workflows, I found that employers, clients, and the delivery team managed project communication and tasks across multiple channels. This made it difficult to maintain a clear view of requests, project progress, and payments.
- **What I did:** Conducted two in-person interviews with key stakeholders, including the company manager and developers who were also primary product users, and mapped existing workflows to understand user and business needs. Designed the user flows, wireframes, interactive prototype, and high-fidelity UI in Figma. Reviewed the flows and designs with these users to gather feedback, refine the solution, and align it with business and technical requirements.
- **Outcome:** Delivered and presented the final design to stakeholders, with the product design prepared for development.

VMLM — landing page redesign, Sepandar.co

Aug – Dec 2024

- **Problem:** The existing landing page was partially developed in code without a defined UI or UX structure. It lacked clear visual hierarchy, content organization, and a consistent path toward the primary action.
- **What I did:** Redesigned the landing page for desktop and mobile, restructuring the layout and content hierarchy to create a clearer and more consistent user experience.
- **Outcome:** Delivered a complete responsive UI/UX design and presented the final direction for implementation.

Health education app — Design Academy, team of three

May – Nov 2023

- **What I did:** Collaborated with two teammates across the full Design Thinking process, from research and ideation to UX and UI design. We divided the project responsibilities across the team so that each member contributed to different stages of the design process, including research and page design.
- **Outcome:** Published as a CaseStudy

EXPERIENCE

Junior Designer — Sepandar.co Aug – Dec

2024 · part-time

- Promoted from a three-month internship into a three-month part-time role, contributing to product and web design across the team's active projects.
- Designed the Sepandar Support Dashboard and redesigned the VMLM landing page for desktop and mobile.
- Collaborated with the cross-functional team and sought feedback from the company manager and developers throughout the design process to align solutions with business and technical requirements.

EDUCATION

B.Sc. Computer Science — Arak Azad University

2022 – 2026

SKILLS & TOOLS

UX/UI Design, Wireframing, Prototyping, Information Architecture, Web Design, Stakeholder & User Interviews, Usability Testing, Personas, Workflow Analysis, Figma, Miro, Notion

LANGUAGES

Farsi (native) , English (intermediate)
